

Ramez – Appraisal Engineer

<http://www.chevron.ca/careers/meet-our-people/ramez>

Ramez: I think as a young professional starting out in industry, one of the things that I found really impressive about Chevron is they actually really do care about you. The career development plan allows you to have an open conversation with your supervisor about where you want to be in one year, three years, five, and ten years and beyond. What that allows Chevron to do is really provide you with the appropriate training and the right resources and positions to put you into and help you reach that goal successfully.

My most satisfying project that I've had to work on at Chevron, there's been many to count but this one in particular we were having some issues with one of our wells. Our leadership team turned to us and asked us, "What do you guys suggest we do?" Within two hours we quickly gathered the appropriate disciplines. We got together in one of our board rooms and we discussed what our options were, what decisions we could take, what the pros and cons were and shortly after the meeting we were able to gather a summary document that we pitched back to our leadership team the next morning, and they accepted it.

That was really cool for me because this was real time, these were big decisions that affect a big part of Chevron for this particular project. Over the last year I've really grown as a young professional from all the different experiences and training opportunities that I've been provided. I get to work on one of the most complex, challenging, unconventional onshore projects in the world. Not only that, I get to work with some of the brightest people.

We're involved in a lot of different aspects and that just opens doors to opportunities and possibilities. On top of that I see the quality of people that Chevron hires here at the company and that gets me excited 'cause these are going to be some friends and colleagues of mine that I get to

work with for the rest of my life. That makes it really fun to want to come into work every day.
